

# RoBo-Study Corporation

A company creating a future where robots coexist with humans

Established	October 2018
Capital	10.05 million yen
CEO	Mitsunori Fukuchi

We are developing small, easy-to-use dialogue robots equipped with voice recognition AI, aiming to solve the problems of loneliness and solitary death.

Other Development Projects: Communication robot production, web ceremonial occasion system, book creation interviewer robot and automatic bookbinding system development

Company representative Mitsunori Fukuchi established CAI Media Co., Ltd. in 1994 for educational content development, and has produced smartphone apps, web systems, e-Learning systems, and English voice recognition robots. In October 2018, he established our company with the aim of solving social problems through communication robots in the rapidly advancing world of digital technology.

A company creating a future where robots coexist with humans

## Differences between our robot and other companies' robots

Hiroshima's Adwin Corporation created a dialogue program linked with ChatGPT for our robot.

- AI utilizes collected data (dialogue content, health, hobbies, visitor conversations, phone calls, etc.) for analysis and evaluation
- Provides feedback to users for safety assurance and to hiring companies, local governments, and organizations
- Robot asks health check questions daily, accumulating responses in the database
- Monitors concerning responses closely and notifies family members and administrators
- Conversation content can be added and modified in the cloud, reflecting changes within minutes
- Enables emergency contact and information transmission
- Multilingual support with no movable joints, making it durable and easy to maintain
- Automatic version updates just by connecting to Wi-Fi
